The present invention describes colon tumour associated proteins (I) and (II) and (II) and be used in gene therapy and vaccine production. (I) and (II) and be used in gene therapy and vaccine production. (I) and (II) may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate colon tumour associated protein (TCAP) expression, such as colonic cancer. For example, (I) and (II) may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of TCARP by expressing inactive proteins or to supplement the patients own production of them. Additionally, (II) may be used to patients own production of them. Additionally, (II) may be used to patients own production of them. Additionally, (II) may be used to complementary sequences may also be used as DNA probes in diagnostic complementary sequences may also be used as DNA probes in diagnostic polymerase chain reaction (PCR) and hybridisation assays to detect and quantitate the presence of similar nucleic acids in samples, and in assays to identify modulators of TCAP expression and activity. The anti-(I) antibodies and antagonists may also be used to down regulate as diagnostic agents for detecting the presence of TCAP expression and activity. The anti-(I) antibodies and antagonists may also be used to down regulate as diagnostic agents for detecting the presence of TCAPs in samples and antagonists may also be used to down and antagonists and antagonists may also be used as diagnostic agents for detecting the presence of TCAPs in samples and antagonists may also be used as diagnostic agents for detecting the presence of TCAPs in samples and AAM24521 represent nucleotide and amino acid sequences given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Colon tumor associated proteins and nucleic acids useful for the prevention, diagnosis and treatment of colonic cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Secrist H, Benson DR, Meagher MJ, Stolk JA;

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher euksayotes for the development of insclicides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLi6176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPM at ftp.wipo.int/pub/published_pct_sequences.
                                                                                        isolated nucleic acid detection reagent for detecting 1000 or mores from Drosophila and for elucidating cell signalling and cell-cel.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             106 gagatgoactacttggatettetgaggeacateategeaaatggagageageggatggae 165

encoded by the genome sequence. The present invention also specifically claims the individual open reading frame (ORF) nucleotide sequences from the genome which encode the individual proteins, but these sequences are not given. A non-human animal infected with RRV can be used for testing the efficacy of drug in the treatment of condition associated with infection with RRV such as Kaposi's sarcoma, lymphoproliferative
                                                                                                                                                                                                                                        disorders, B-cell hyperplasia, lymphadenopathy, spenomegaly, hypergammaglobinulinaemia or autoimmune haemolytic anaemia, by administering the drug to a immuno-compromised non-human primate preferably Rhesus macaque monkey obtained by as a result of infection by Simian Immunodeficiency Virus (SIV). RRV is useful for producing non-human primate model for testing potential treatments for conditions associated with RRV infection. It is also useful for testing the efficacy of the candidate vaccine against RRV infection or conditions associated with its infection by administering the vaccine to the subject capable of infection with RRV, incomlating the subject with RRV and observing the effect of vaccine. AAG64755 to AAG64765 and AAB53205 to AAB53213 represent sequence used in the exemplification of the
macaca mulatta rhadinovirus 17577 (RRV). AAC64754 represents the
                             genome sequence, and AAB53123 to AAB53204 represent the proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        present invention.

macrophage inhibitory protein (vMIP)-1A and -1B and beta-chemokine-like (BCK) protein. The sequences of these proteins are given in AAM40100-W40100-W40100.

Polynucleotide containing HHV-8 genes encoding one or more of these proteins. The invention also claims that the polynucleotide and the proteins. The invention also claims that the polynucleotide and the proteins are to diagnose an HHV-8 associated disease, e.g. using antibodies to the proteins, to diagnose an HILiple myelome and body cavity based large cell lymphoma (BCBL). The proteins have also been claimed to be

compounds for drugs to treat HHV-8 diseases.

useful in screening

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (HHV'8) divergent locus DL-B which lies between open reading frames 11 and 17. Sequencing of the HHV-8 divergent locus DL-B revealed the presence of nine viral ORRS with gene products related to cellular proteins. These proteins include the thymidylate synthase (TS), dihydrofolate reductase (DHFR), Bcl-2 homologue, IE-1A, IE-IB and, four cytokines which include viral interleukin-6 (vIL-6), viral

```

```
The present sequence represents the nucleotide sequence of Varicella virus, Dumas strain. The specification describes a method for the quality control of an attenuated pox vaccine, characterised in that the DNA sequence of specific parts of the viral genome in a sample is determined and proved to be conserved rather than mutated in comparison
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       specific positions of of attenuated live varicella
